

COMPLETE LIST OF ALL OF THE CLAIMS

1-20. (canceled)

21. (new) A video display apparatus that has separate display means for textual and other visual information, comprising:

input means that receives input signals that comprise video signals, audio signals, and text signals;

video display means for videos;

retractable separate display means for textual information and other visual information, which is hidden when said retractable separate display means is not in use; and

display control means that extracts said video signals and said text signals from said input signals, and sends said video signals to said video display means and said textual signals to said separate display means.

22. (new) The video display apparatus in accordance with claim 21, wherein said retractable separate display means uses different text colors for different speakers.

23. (new) A video display apparatus that has separate display means for textual and other visual information, comprising:

video display means for moving pictures;

separate display means for textual information and other visual information;

first video input means that receives input first video signals which are generated from video data;

second video input means that receives second video signals which are generated from textual data; and

1 display control means that displays said first video signals to said video display
2 means and said second video signals to said separate display means.

3 24. (new) The video display apparatus in accordance with claim 23, wherein said
4 separate display means uses different text colors for different speakers.

5 25. (new) A video playing system, comprising:

6 a DVD player which comprises first video generating means which generates and
7 outputs first video signals from video data, second video generating means which
8 generates and outputs second video signals from textual data; and
9 a television receiver which comprises video display means for moving pictures,
10 separate display means for textual information and other visual information, first
11 video input means that receives said first video signals, second video input means
12 that receives said second video signals, and display control means that displays said
13 first video signals to said video display means and said second video signals to said
14 separate display means.

15 26. (new) The video display apparatus in accordance with claim 25, wherein said
16 separate display means uses different text colors for different speakers.

17 27. (new) A DVD player that outputs two video signals, comprising:

18 first video generating means which generates and outputs first video signals from
19 video data; and
20 second video generating means which generates and outputs second video signals
21 from textual data.

22 28. (new) The DVD player in accordance with claim 27, wherein said textual data
23 comprises subtitle images.

1 29. (new) The DVD player in accordance with claim 27, wherein said textual data
2 comprises closed caption text.

3 30. (new) A DVD player that outputs video signals and text codes obtained from
4 subtitle images, comprising:

5 video generating means which generates and outputs video signals from video data;
6 and
7 optical character recognition means which converts subtitle images into text codes
8 and outputs said text codes.

9 31. (new) A DVD player, comprising:

10 video generating means which generates video signals from video data;
11 optical character recognition means which converts subtitle images into text codes;
12 and
13 mixing means which, from said video signals and said text codes, produces mixed
14 signals which are separable into said video signals and said text codes, and outputs
15 said mixed signals.

16 32. (new) The DVD player in accordance with claim 31, wherein said mixing means
17 converts said text codes as closed caption text.

18 33. (new) A cinema display apparatus, comprising:

19 video display means;
20 separate display means for textual information and other visual information which
21 is located on the outer perimeter of said video display means;
22 a film projector that projects videos on said video display means;

1 a textual information processing means that transmits text signals to said separate
2 display means in synchronization with said videos; and
3 synchronization means which comprises a film counter and interfacing means that
4 sends film counter information to said textual information processing means.

5 34. (new) A cinema display apparatus, comprising:

6 video display means;
7 retractable separate display means for textual information and other visual
8 information which is located on the outer perimeter of said video display means
9 and hidden when said retractable separate display means is not in use;
10 a film projector that projects videos on said video display means;
11 a textual information processing means that transmits text signals to said separate
12 display means in synchronization with said videos; and
13 synchronization means which comprises a film counter and interfacing means that
14 sends film counter information to said textual information processing means.
